

# Transform your DSAR information search process

Are you struggling to service GDPR Data Subject Access Requests (DSARs) or Freedom Of Information (FOI) requests in a timely and efficient manner? Are you concerned that you might not be providing all the information that you should be to service them correctly? Worried there may be a sudden increase in requests and not being able to cope? If you are, then read on...

## Find information in minutes, not days!

- **12.9 days** – Average time to comply with a DSAR\*
- Finding, collating and redacting information accounts for the majority of this time\*
- But with **ibZIP** you **find and collate the required data in minutes**

\* Source: "Right of Access Research Findings" (infoboss et al 2020)

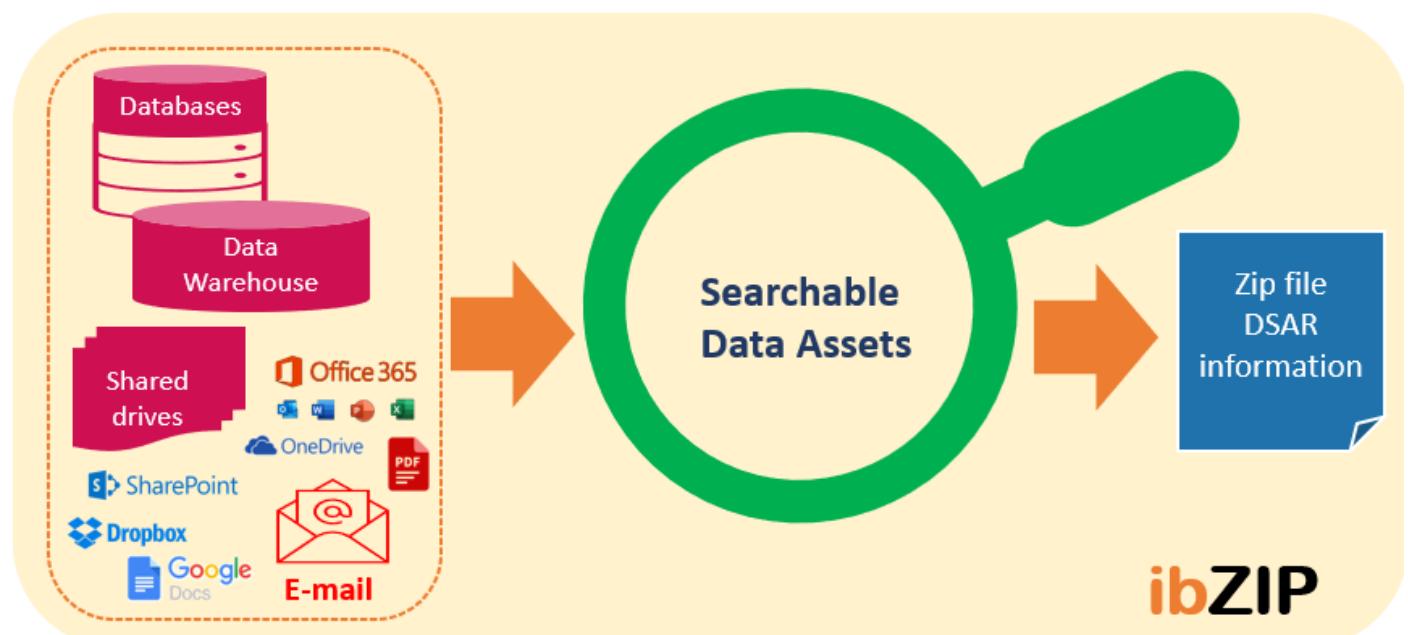

### Introducing **ibZIP**

Simple to deploy and easy to use, **ibZIP** enables you to:

- Search and locate information from anywhere within your organisation's digital data estate;
- Easily identify and collect the required data for the DSAR; and
- Export the results and any document attachments for subsequent review, redaction, and distribution.

### How does **ibZIP** help?

The software is designed with the specific purpose of empowering your DSAR servicing personnel with the tools needed to quickly search and locate the information held on a data subject across all your organisation's digital data sources: databases, shared drives, cloud drives and emails. Once data has been collated it can be easily exported (to a zip file) for subsequent processing such as review, redaction and distribution to the client.
