

Data management assurance audit

Are you assured that your organisation is managing its data properly? Managing it in accordance with your own data protection policies and procedures? Complying with the GDPR and other data regulations? Maintaining high levels of data quality?

If you would like assurance as to how well your organisation is managing, protecting, controlling and utilising the data it collects, then using **ibAUDIT**, will help determine how effective your policies and procedures are across a number of areas.

We assess:

- If your data retention policy is working?
- The quality of your data
- How effective and efficient your data subject access or freedom of information request process is?
- Where you are storing personal and sensitive data?
- If you are effectively servicing the rights of the data subject? E.g. the right to be forgotten, to rectification or to object to automated processing.
- If you are managing your unstructured data? Removing redundant, obsolete and trivial (ROT) data across shared drives, email and cloud storage or is it growing out of control?
- If you are storing or processing information that you shouldn't be? E.g. credit card numbers, bank accounts, child data and more.

“ibAUDIT has enabled us to identify issues in our data management processes, at the data level. Enabling us to make the required changes to mitigate GDPR non-compliance risks, improve data quality and assure the board that we’re managing our data effectively.”

Our data audit prices start from just £1,995 (ex VAT) for up to one terabyte of data or one million database records. For this, you’ll receive a comprehensive report detailing all issues found in your data and processes with access to the software for a further month to undertake further analysis if required.

For more information visit our web site, to book and audit email or call...
